Problem & Requirements

Problem Statement & Scope

Small independent artists need one place to host their art and build deeper connections with local fan communities. This iteration establishes the requirements, user stories, and use cases for the platform.

- **Artist:** Upload music, images, stories, and videos; promote events; interact directly with supporters.
- **Fan:** Discover artists nearby, follow their updates, attend shows, and interact with the community.
- **Administrator:** Moderate content, review artist applications, and keep the community safe.

Functional Requirements – Iteration 1

- Role-based access control with distinct workflows for Fans, Artists, and Admins
(New)
- Artist profiles with multimedia uploads (music, art, stories, videos) and event promotion
(New)
- Fan “about” profiles and proximity-based radius search for artists
(New)
- Direct messaging between fans and artists, and between fans
(New)
- Admin tools to review artist applications, handle user reports, and ban accounts that violate the ToS
(New)

Environment & Constraints

- Web-based application with a 3-tier architecture: frontend web server, backend application layer, and database
- Deployed to a cloud provider (GCP, AWS, or Azure)
- CI/CD pipeline with mandatory pull requests
- Optional AI features (moderation, recommendations, AI-generated art detection) must respect user privacy, include human oversight, and have fallback behavior

User Stories & Features

User Stories – Iteration 1 Focus (Fan & Artist)

- **US-01** As a Fan, I want to search for artists by proximity radius so that I can discover and attend local shows.
- **US-02** As a Fan, I want to receive artist recommendations so that I can find creators similar to ones I enjoy.
- **US-03** As an Artist, I want to post music, images, and videos so that I can share my art with my fans.
- **US-04/05** Fans comment on artwork; Artists monitor and manage those comments.
- **US-06** Users send direct messages to collaborate or socialize.
- **US-07/08** Artists create and update events so fans have accurate details.

User Stories – Iteration 1 Focus (Administrator)

- **US-09** As an Administrator, I want to review artist verification applications so that only legitimate artists are granted the Artist role.
- **US-10** As an Administrator, I want to review conduct reports so that I can make fair moderation decisions.
- **US-11** As an Administrator, I want to suspend or ban accounts that violate the ToS so that the platform stays safe.
- **US-12** As an Administrator, I want to process ban appeals so that unfair or incorrect bans can be reversed.

Technical Challenges, Risks & Progress

Key Technical Challenges

- **AI feature integration:** Moderation and recommendations raise performance and privacy concerns.

Approach: Decouple AI processing from core traffic via scalable REST APIs, with heuristic fallbacks if models fail.

- **3-tier cloud deployment:** Frontend, backend, database, and a strict CI/CD pipeline add DevOps overhead.

Approach: Set up automated testing and mandatory pull requests early; use managed cloud services.

Key Risks & Mitigation

- **Scope creep:** Hybrid media, messaging, and AI may exceed the semester timeframe.

Mitigation: Prioritize core workflows (authentication, media, messaging) over optional AI features using agile sprints.

- **Content moderation:** User-generated media and messages risk ToS violations.

Mitigation: User reporting, Admin review workflows, and automated moderation filters.

Competitive Advantage & Enhancements

- **SoundCloud** – Strong audio hosting, discovery, and timestamped comments, but no visual art, video interaction, or local discovery.
- **Instagram** – Huge reach for visual art, video, and messaging, but not tailored to independent artists, weak audio hosting, and favors viral content over local community.
- **Our Value Add** – A multi-disciplinary hub (audio, art, video in one profile), proximity-based discovery, and an authenticity & safety focus with privacy-respecting AI tools.

Iteration 1 Progress

Completed

- GitHub repository and Trello board
- 15 fully-dressed use cases (3 per member)
- Use case diagram
- Domain model
- Project slides

Carried into Iteration 2

- Wireframes
- Clarifying questions for the client
- Workflow diagram
- System sequence diagrams

Use Cases

Actors: Fan, Admin, Artist

- **Search for Artist (Fan):** Find artists by name, genre, or location, then view a profile, chat, follow, or book. (*Planned*)
- **Review Report (Admin):** Review pending user reports and dismiss, warn, delete content, or suspend/ban, with an audit trail. (*Planned*)
- **Create Event (Artist):** Submit an event with tiered pricing; it is published after Admin approval. (*Planned*)

Actors: Artist, User (Artist or Fan)

- **Make a Post (Artist):** Publish text and files with public/private and comment permissions. (*Planned*)
- **Message Another User:** Start a new conversation thread with a recipient who accepts messages. (*Planned*)
- **Monitor Comments (Artist):** Hide comments on their posts, and optionally report or block the commenter. (*Planned*)

Actors: Artist, Admin, Fan

- **Update Event:** As an artist I want my fans to get the most up to date information about my events. *(Planned)*
- **Unban Fan:** As an admin I want to do my job and unban fans who file appeals. *(Planned)*
- **Receive Recommendation:** As a fan I want to get recommendations for artists similar to the ones I like. *(Planned)*

Actor: Fan

- **Follow Artist:** Follow an active Artist without creating duplicate relationships. *(Planned)*
- **Manage Fan Profile:** Update bio, interests, and image with privacy preferences applied. *(Planned)*
- **Report Inappropriate Content:** File a report that is stored as pending for Admin review. *(Planned)*

Actors: Admin, Fan

- **Suspending Artist Account (Admin):** Suspend or ban an account that violates the ToS, revoking its permissions. *(Planned)*
- **Comment on Artwork (Fan):** Post a comment that is validated against business rules before publishing. *(Planned)*
- **Review Artist Verification Application (Admin):** Approve or reject applications to grant the Artist role. *(Planned)*

Use Case Diagram

Domain / Class Model

Domain Model

Next Steps

Looking Ahead to Iteration 2

- Complete wireframes, the workflow diagram, and system sequence diagrams for each use case
- Send clarifying questions to the client and record the answers
- Extend operation contracts and test cases to every team member's use cases
- Set up the 3-tier skeleton, CI/CD pipeline, and mandatory pull requests; begin authentication and role-based access

Trello Breakdown & Team Roster

Ticketing System (Trello) – Summary

IndieDev board – 25 tickets

- **12 resolved** (checked complete)
- **13 open**
- Lists: Iteration 1 (all 25 tickets), Iteration 2 and 3 (empty so far)
- Labels: Individual, Team, Requirements Engineer, Design Engineer, Project Librarian

Tickets by member

Member	Tickets	Trello actions
Alejandro Garcia Jr	7	71
Garrett DeYong	3	22
Nicholas Nolen	4	23
William Waweru	3 [†]	13
Gan-Orgil Gantumur	3	15

[†] Created by William; not assigned to a member in Trello.

Resolved Tickets (12)

Ticket	Label	Owner
Create GitHub	Individual	A. Garcia
Create Trello	Individual	A. Garcia
Complete Use-Case Diagram	Team	A. Garcia
Complete Domain Model	Team, Requirements Eng.	N. Nolen
Create Project Slides	Team, Project Librarian	A. Garcia
Domain Modeling	–	–
UC: Search for Artist – Fan	Individual	A. Garcia
UC: Review Report – Admin	Individual	A. Garcia
UC: Create Event – Artist	Individual	A. Garcia
UC: Suspending Artist Account – Admin	Individual	G. Gantumur
UC: Comment on Artwork – Fan	Individual	G. Gantumur
UC: Review Artist Verification Application – Admin	Individual	G. Gantumur

Open Tickets (13)

Ticket	Label	Owner
Schedule Team Meeting	–	–
Complete Individual Use-Cases (3/Person)	Individual, Team	–
Create and Design Wireframes	Team, Design Engineer	–
Create Clarifying Questions	Team, Project Librarian	–
UC: Message Other User – Artist/Fan	Individual	G. DeYong
UC: Make a Post – Artist	Individual	G. DeYong
UC: Monitor Comments – Artist	Individual	G. DeYong
UC: Update Event – Artist	Individual	N. Nolen
UC: Unban Fan – Admin	Individual	N. Nolen
UC: Receive Recommendation – Fan	Individual	N. Nolen
UC: Follow Artist – Fan	Individual	–
UC: Manage Fan Profile – Fan	Individual	–
UC: Report Inappropriate Content – Fan	Individual	–

Trello History (Central Time)

- **9/10** – Alejandro creates the IndieDev board and the Iteration lists; Garrett joins the board
- **9/11** – Gan-Orgil joins the board
- **9/15** – Alejandro creates the deliverable tickets and labels, and closes out Create GitHub and Create Trello; Gan-Orgil creates his three use case tickets
- **9/27** – Garrett creates and describes his three use case tickets
- **9/28** – Nicholas joins and creates his three use case tickets; William joins and creates his three; use case and slide tickets are checked off; Gan-Orgil adds the Domain Modeling ticket
- **Total:** 144 logged actions (cards created, members assigned, labels and descriptions updated, tickets completed)

Team Roster: Commits & Hours

Repository: AGarciaJr/CSI5324-IndieDevs

Open pull requests: 2

Member	Commits	Hours	Main contributions
Alejandro Garcia Jr	<i>[n]</i>	<i>[h]</i>	Repo and board setup, 3 use cases, use case diagram, documentation, slides
Garrett DeYong	<i>[n]</i>	<i>[h]</i>	3 use cases (posts, messaging, comment monitoring)
Nicholas Nolen	<i>[n]</i>	<i>[h]</i>	3 use cases (events, unbans, recommendations), domain model
William Waweru	<i>[n]</i>	<i>[h]</i>	3 use cases (follow, fan profile, reports)
Gan-Orgil Gantumur	<i>[n]</i>	<i>[h]</i>	3 use cases (suspensions, comments, artist verification)
Total	<i>[n]</i>	<i>[h]</i>
