

Use Case Receive Recommendation

Nicholas Nolen

Actor

Fan

Preconditions

1. A fan has logged into the system.
2. A fan has previously interacted with artists on the platform.

Postconditions

1. A fan receives recommendations for artists they might like.

Main Flow

1. A fan selects the option to display artists they might like.
2. The system retrieves the artists a fan has previously interacted with (e.g. viewed profiles, liking posts, commenting on posts, etc.).
3. The system constructs a numerical score for each of the types and genres of content the user interacts with.
4. The system uses an AI process to find artists with similar content to the user's most interacted with types.
5. The system displays a list of artists to the user.

Extensions

1a. New Fan

- 1a1. The fan has logged into the system for the first time and does not have interactions.
- 1a2. The system does not show the option to display artists they might like.
